Sessions	Conversion Rate	Orders	Revenue	AOV
360,129	1.30%	5,372	$340,647.00	$63.41

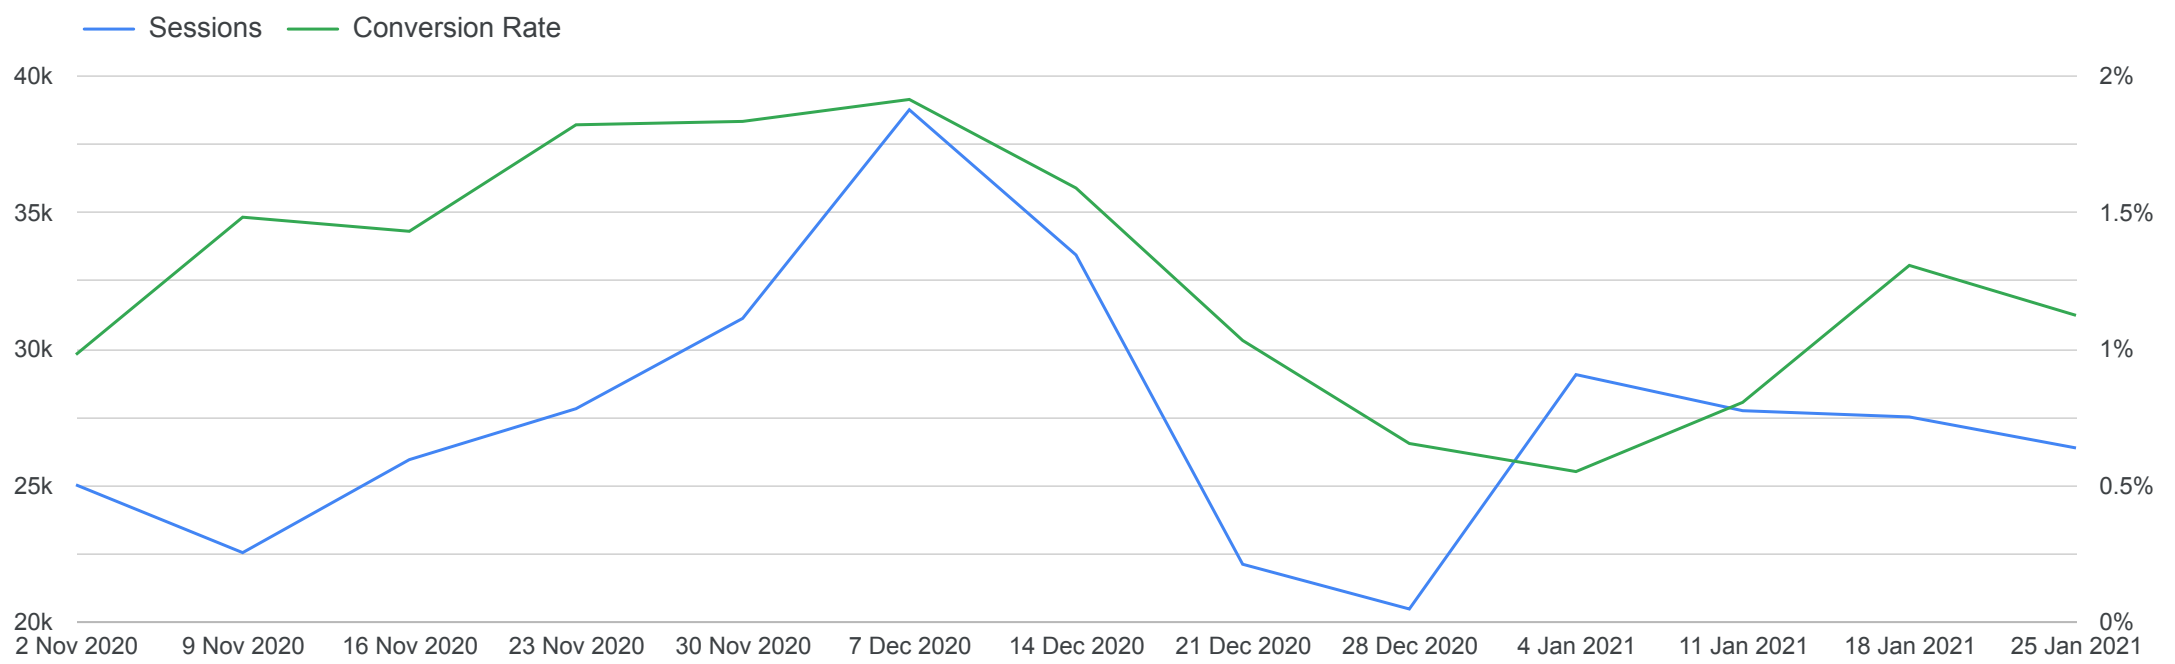

Device | Channel | Country

New visitors fall behind at checkout → payment (44% vs 82%)

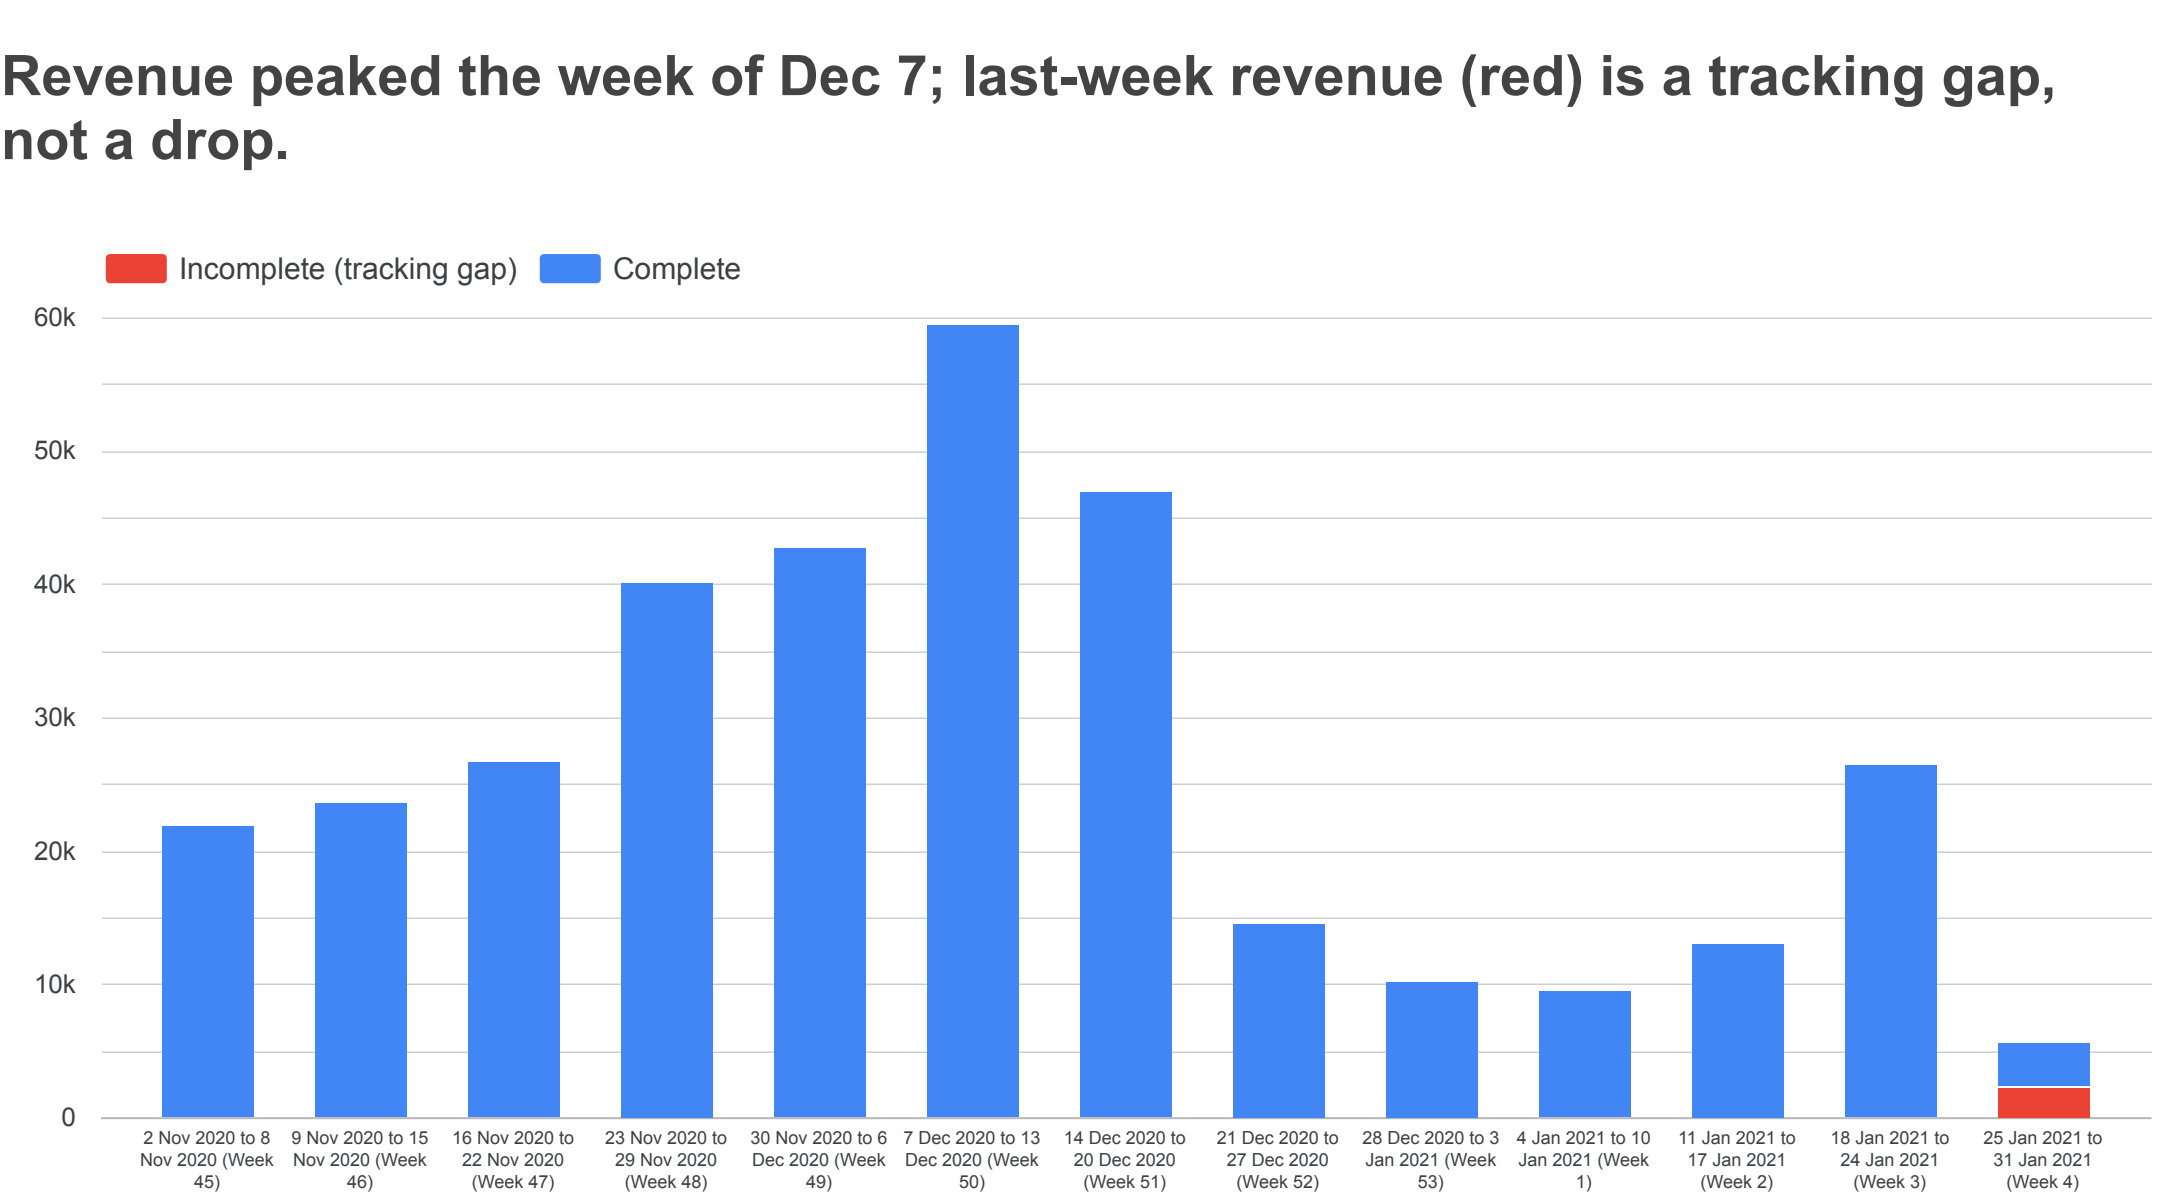

Visitor Type	Sessions	Session -> View	View -> Checkout	Checkout -> Payment	Payment -> Purchase	Conversion
New	261,238	19.97%	11.35%	43.74%	67.90%	0.67%
Returning	98,891	25.13%	19.74%	81.88%	73.19%	2.97%

1 - 2 / 2

January traffic recovered, but conversion didn't.

Revenue peaked the week of Dec 7; last-week revenue (red) is a tracking gap, not a drop.

Raw last-touch credits Referral with 54% of revenue; most of it is the store referring itself.

- Source: Google Analytics 4 public sample (Google Merchandise Store), Nov 1, 2020 – Jan 31, 2021. Data is partly obfuscated by Google.
- Users are browser cookies, not people. Funnel is session-level; add_to_cart is excluded because it is under-tracked.
- Revenue uses deduplicated orders (raw events overstated revenue by 5.9%). Jan 26–31 revenue is incomplete (tracking gap, ~$16K missing).
- "Self-referral" = sessions credited to the store's own domain; cleaned attribution skips them.
- Portfolio project by Naga Hema Ramishetty using Google's public sample data; not affiliated with Google.
